Context and approach

Low-lying coasts in Aceh Timur and Makassar are exposed to tsunami, tidal flooding and storm surge. Early childhood centres are often left out of preparedness funding, with no drills, signage or age-appropriate materials, leaving young children and caregivers especially vulnerable.

The programme embeds play-based tsunami and coastal-flood drills into daily PAUD learning, training 100 teachers, equipping 10 centres with safe-route maps, child-level signage and emergency kits, and engaging parents through joint simulations with BPBD and PMI.

Project outputs

- Train 100 PAUD teachers in play-based drills and psychosocial first aid
- Produce child-friendly media: e-comics, posters, flashcards and songs
- Equip 10 centres with evacuation signage, safe-route maps and kits
- Run joint school and community simulations with disaster agencies
- Children and teachers know how to evacuate safely when hazards strike
- Centres have inclusive plans covering children with disabilities
- Families act on early warnings together with schools and local responders
