Context and approach

Families displaced by Typhoon Sendong in 2011 still live in flood- and landslide-prone barangays of Iligan City. Many lack early warning, preparedness training and stable livelihoods, and remain among the most vulnerable to recurring hazards.

RDRRAC will deliver community-based disaster education, first aid and simulation drills, establish Community-Based DRRM Committees for hazard mapping and evacuation planning, and add mangrove planting and eco-brick recycling to reduce flood risk and waste.

Approximate project location.

Project outputs

- Run disaster education, first aid and basic life support training
- Establish Community-Based DRRM Committees in four barangays
- Conduct hazard mapping, evacuation planning and simulation drills
- Plant mangroves and launch eco-brick and recycling initiatives
- IDP households can act before, during and after floods and landslides
- Community committees coordinate with barangay and city disaster offices
- Natural buffers and cleaner waterways reduce local flood exposure
